

PROJECT SYNOPSIS

TITLE

JOB POSTING APPLICATION

OBJECTIVE

- To develop an intuitive, efficient, and scalable job posting and job search platform where employers can post job openings, and candidates can browse, apply, and track their applications.
- The application will also offer features to enhance user engagement and make the recruitment process smoother.
- Streamline recruitment by providing employers with an easy-to-use platform to post jobs, manage candidates, and track hiring progress in one place.
- Offer job seekers a seamless experience to discover relevant opportunities based on their skills, location, experience, and preferences.
- Allow clear communication through messaging and notifications, ensuring both parties are informed throughout the hiring process.

PROBLEM DEFINITION

In the modern recruitment landscape, both job seekers and employers face numerous challenges in connecting efficiently and effectively. Despite the availability of various online job portals, the process of finding the right job or the right candidate remains time-consuming, and often inefficient.

For job seekers, the difficulties include:

- Navigating through numerous job portals with redundant or outdated listings.
- Lack of personalized job recommendations matching their skills and preferences.

For employers and recruiters, the challenges are equally significant:

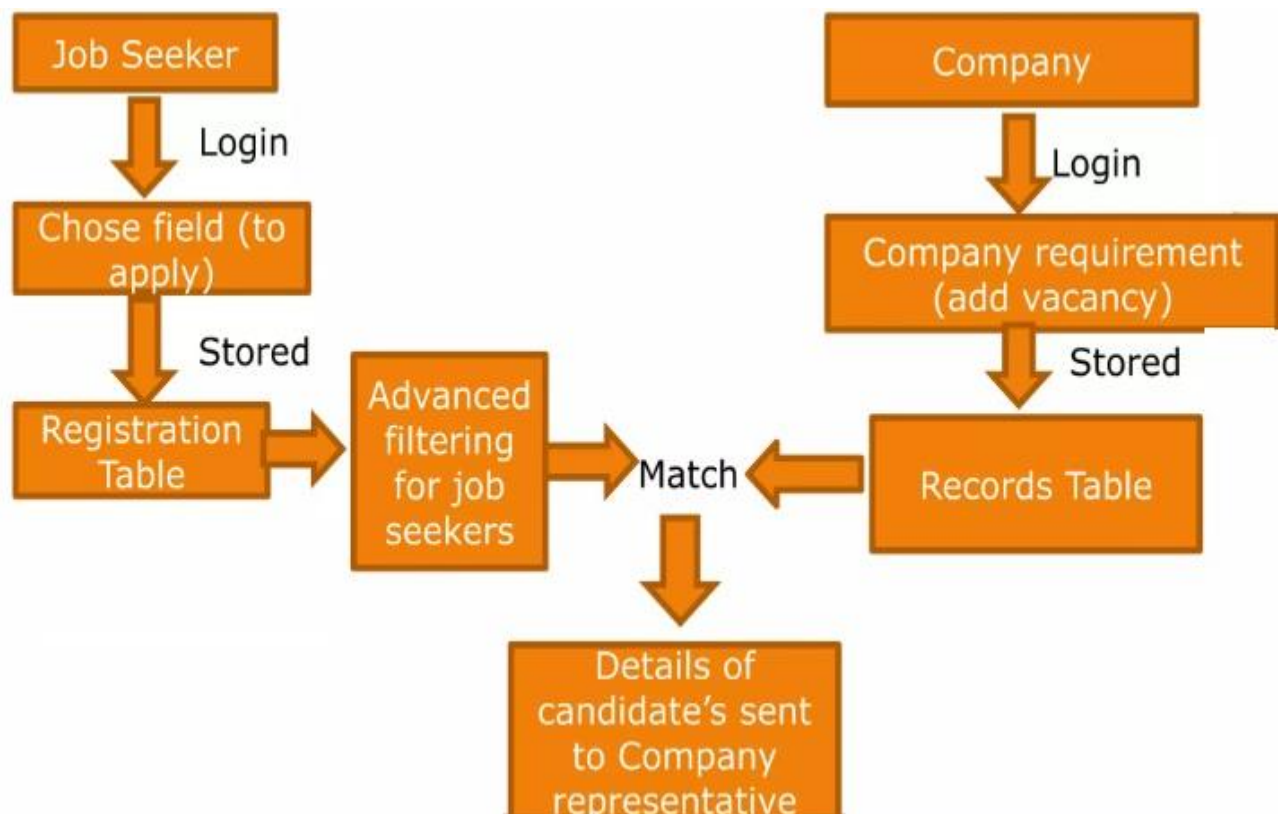

- Managing large volumes of unfiltered applications, many of which are irrelevant to the job requirements.

- Limited tools to evaluate candidate quality and suitability before interviews.

Additionally, existing systems often lack transparency, real-time communication, and data-driven insights, resulting in poor user experiences and extended hiring cycles.

METHODOLOGY

DATA FLOW DIAGRAM

STAGES OF DATA FLOW

- User Module
- Company Module
- Admin Module

In the above **DFD** we can see the basic data flow of our website.

The User is expected to be internet familiar and to be able to use Job Portal.

The Admin is expected to be familiar with internet, database and AWS.

SOFTWARE/TOOLS

- Frontend: CSS / Bootstrap
- Backend: PHP/Laravel
- AWS Services: Amazon EC2
Amazon S3
Amazon RDS
Amazon API Gateway
Amazon Cognito
Amazon CloudFront
AWS Auto Load Balancer
Amazon SNS
AWS CloudWatch
IAM

HARDWARE REQUIREMENT

- Processor (CPU)-Intel Core i5 or higher
- RAM-16 GB or more
- Hard Disk -250 GB HDD
